Search Notes

Attached are litigation search results in Lexis Nexis, and CourtLink and Q-Pat/Orbit.

No Litigation was found for Patent Number 5131069.

If you have any questions, please feel free to contact me.

Thanks,

Diane

Fiber amplifier having modified gain spectrum

AB

Disclosed is a fiber amplifier system including a gain fiber (10) having a single-mode core containing dopant ions capable of producing stimulated emission of light at wavelength λ_p when pumped with light of wavelength λ_p .

Absorbing ion filtering means (17) is operatively associated with the gain fiber (10) to alter the gain curve.

If the absorbing ions are the same as the gain ions of the gain fiber, the system further includes means for preventing pump light from exciting the gain ions of the filtering means (17).

The excitation prevention means may take the form of means for attenuating pump light.

If the absorbing ions are different from the dopant ions of the gain fiber, such absorbing ions can be subjected to light at wavelength λ_p , but they will remain unexcited.

Such absorbing ions can be used to co-dope the gain fiber, or they can be incorporated into the core of a fiber that is in series with the gain fiber. <IMAGE>
